Nariman Ahmadizar

Web Developer at Daramino
Iran

Summary

I'm a passionate and results-driven Software Engineer with 5+ years of hands-on experience building powerful, scalable, and high-performance web applications. My core expertise lies in Python and the Django framework, where I've architected and delivered everything from clean RESTful APIs to full-featured web platforms that real users depend on every day.

On the frontend, I bring ideas to life with JavaScript — crafting smooth, responsive, and intuitive user interfaces that make the backend work shine. I believe great software is not just about clean code under the hood, but also about delivering experiences that feel effortless to the end user.

Over the years, I've worked across the full web development stack — designing database schemas, optimizing queries, building secure authentication systems, integrating third-party APIs, and deploying production-ready applications. I take pride in writing code that is not only functional but maintainable, readable, and built to scale.

What I work with:

Python | Django | Django REST Framework

JavaScript | HTML | CSS

PostgreSQL | MySQL | SQLite

Git | Docker | Linux | REST APIs

☁️ # Cloud Deployment | CI/CD Pipelines

I'm someone who genuinely loves the craft of software engineering. I enjoy solving complex problems, breaking down challenging requirements into elegant solutions, and continuously learning new tools and technologies to stay ahead in a fast-moving industry. Every project I take on is treated with the same level of dedication — whether it's a startup MVP or a large-scale enterprise system. I care deeply about code quality, performance, and delivering on time. Beyond the technical side, I'm a strong communicator and a collaborative team player. I've worked alongside designers, product managers, and fellow developers to ship products that make a real impact. I understand that the best software is built by great teams, not just great individuals.

If you're looking to explore my work, check out my featured projects below — each one reflects my commitment to building things the right way. I'm always open to connecting with fellow engineers, tech enthusiasts, and anyone who shares a passion for building great software.

Let's connect and build something amazing.

Experience

Daramino

Web Developer

November 2025 - Present (8 months)

Tehran Province, Iran

That was an stratup for the market on iran and the back-end language was laravel

Iran Jujitsu Academy

Web Developer

June 2026 - Present (1 month)

We are creating an website that is use for practitioners and coach and its for everyone

INVESTATE

Python Engineer

May 2025 - November 2025 (7 months)

Tehran Province, Iran

We Creat a bot for clients to get an Apointment easly with AI and python language
